

LeadDrive

24/02/2026

OVERVIEW

HSR Motors receives customer leads from multiple sources such as social media platforms, their website, and offline promotional events. Currently, these leads are managed using spreadsheets, which makes it difficult for the team to update information, track progress, and collaborate efficiently.

To address this issue, I designed a desktop web application called **LeadDrive** that helps the Sales Team manage leads in an organized and structured manner. The system allows them to view all leads, check customer details, update the lead status, assign responsibilities, and record interactions in one place.

The application also includes a dashboard for the Business Manager to monitor overall performance, track lead conversion, and analyze which sources generate the most leads. The main objective of this solution is to simplify lead management, reduce manual work, and improve coordination between team members.

FEATURES

1. Lead Listing

Displays all leads in a table format with details such as customer name, contact number, source, status, and assigned salesperson. Filters and search options help users quickly find specific leads.

2. Lead Details

Shows complete information about a selected lead, including personal details, car interest, communication history, and notes added by the sales team.

3. Lead Management

Allows users to update the lead status, assign the lead to a team member, schedule follow-ups, and add remarks after each interaction.

4. Dashboard

Provides a summary of key metrics such as total leads, converted leads, pending leads, and performance trends to help the Business Manager make informed decisions.

5. Smart Assistance

The system also suggests next actions for high-priority leads to improve response time and conversion chances.

WIREFRAME / MOCKUP / PROTOTYPE

USER FLOW

1. The Sales Team opens the application and views the Lead Listing screen.
2. They search or filter leads based on priority or status.
3. After selecting a lead, they view detailed customer information on the Lead Details screen.
4. The sales member updates the lead status, assigns follow-up actions, or adds notes through the Lead Management screen.
5. The Business Manager uses the Dashboard to monitor team performance and overall lead conversion.
